Collection. Collecting and Preserving Insects. Collecting insects can be a fun hobby, and is also an important step in IPM. The resources in this collection will help you learn how to find and collect insects and arthropods, then prepare them so that they can be useful for identification and research efforts. By Silvia Rondon, Mary Corp,

The next step after collecting insects is to preserve them permanently for future display and study. Insect larvae and soft-bodied and extremely tiny specimens are preserved in liquids. Isopropyl alcohol (70 percent) or equivalent is best. All others are preserved on specially designed insect pins.

Properly preserved insect specimens will last indefinitely. There is a proper way to preserve each kind of insect. Most are mounted dry on pins. Some very small specimens are best glued to small cardboard points mounted on pins. Some are preserved in alcohol and others can be mounted on microscope slides. Use the following list as a guide.
