GRAPHING LINEAR INEQUALITIES OBJECTIVES. Upon completing this section you should be able to graph linear inequalities. In chapter 4 we constructed line graphs of inequalities such as. These were inequalities involving only one variable. We found that in all such cases the graph was some portion of the number line.

For instance, look at the top number line  $x = 3$ . We just put a little dot where the '3' is, right? Now an inequality uses a greater than, less than symbol, and all that we have to do to graph an inequality is find the the number, '3' in this case and color in everything above or below it. Just remember

By Jeff McCalla, C. C. Edwards . Your TI-84 Plus calculator was not made to graph inequalities on a number line, but it can be used to accomplish that task. The reason your calculator is able to perform a task that it was not designed for is the Boolean logic your calculator uses to evaluate statements.
